

Cyclos 4 Mobile App Privacy Policy

Cyclos values your privacy. Therefore we do not track any of your data, when using the Cyclos mobile app, for any commercial purposes. When you connect to a Cyclos instance that is not hosted by Cyclos we only get the following data:

1. The statistics on the amount of installations from the Google Play Store and from iTunes Connect, collected by Google and Apple (this is standard for all applications available on the stores).
2. Also the mobile app connects with a Cyclos server to check if the version of the mobile app is compatible with the hosted Cyclos version. We do save this ping for statistical purposes.

That's all the data we get. Of course if you install the Cyclos mobile app and connect to a Cyclos instance hosted by us, more data is transferred. If you, for example, perform a payment using the mobile app this will be stored in the system, but that's the idea of doing a payment. To see how this data is managed, please search for the privacy policy of the Cyclos instance you connect to.

The camera function is only used to scan bar or QR codes. Cyclos doesn't require access to your phone's contacts. The GPS is only used to look for local businesses. The GPS data is never stored or tracked on our server.

Enjoy using our mobile app!

The Cyclos team
